DATA & AI ADVISORY SERVICE

CYBIT

DATA & AI ADVISORY SERVICE

Where is data or AI holding your business back?

Conflicting reports. Hours spent finding answers. AI pilots that stall. Licences with unclear returns. Agents with no clear owner. Concerns about skills, security or where your information goes.

Cybit consultants help you understand the impact, assess the causes and agree a plan tied to your business priorities.

A review that fits your needs

Data and Insight Review: Improve reporting, data quality, integration and agreed business definitions. Identify how people can find and use the insight they need.

AI Advisory Assessment: Plan your first deployment or review existing AI. Assess use cases, information readiness, controls, adoption, costs and business value.

Choose either review or combine them. We gather shared evidence once and provide one coordinated roadmap.

How we work with you

We start with recent examples of your challenges, their frequency and their business impact. Through workshops, stakeholder interviews and agreed evidence checks, we assess your current position and test the assumptions behind your plans.

Your Cybit consultant reviews the findings with you, weighs the options and presents recommendations with owners and measures of success.

WHAT YOUR REVIEW CAN COVER

Data foundations
Quality, integration, ownership and shared definitions. Structured data and documents, with access controls and sources suited to your use cases.

Trust in AI
Grounding, retrieval and output quality. Evidence, human checks and acceptance criteria matched to the consequences of an error.

Insight where you work
Reporting gaps and dashboard fatigue. Better ways to find and explain answers, including conversational access in everyday tools where useful.

Sovereignty and control
Where data resides and is processed, who can access it and what contracts permit. Compare cloud, on-premises and local model options.

Agent governance
Agent inventory, purpose, ownership and permissions. Identify hidden use and decide what to retain, improve, consolidate or retire.

Adoption and value
Skills, fair access to training and adoption barriers. Baselines and comparisons of time, errors, rework and independently reviewed quality.

Costs and carbon
Licence and token consumption, cost controls and suitable model choices. Optional CO2e estimates with clear boundaries, assumptions and data limits.

WHAT YOU RECEIVE

An assessment report linking findings to evidence, business impact and unresolved questions. Prioritised use cases and recommendations, with options and trade-offs. A phased roadmap showing dependencies, indicative effort and costs, suggested owners and success measures. We include governance, skills and adoption actions, then present the plan to your stakeholders.

SCOPE AND PRICING

Choose Data and Insight, AI Advisory, or a combined engagement. Package bands start with employee count: 50 to 100, 101 to 500, 501 to 1,000 and 1,001 or more. We confirm the fee and timetable after a short scoping discussion.

Your proposal defines workshops, business areas, platforms, evidence checks and any sample of agents for detailed review. You provide a sponsor, relevant stakeholders and agreed records. Complexity and risk determine review depth. Implementation and further technical testing are scoped separately.

WHY CYBIT

Cybit delivers the service through its own consultants, drawing on experience in data engineering, analytics, cloud and cybersecurity. We connect business priorities to technical decisions and help you establish how to judge the results.
